

## Miscellaneous changes to consider after System O/S Upgrade

1. Signoff command needs to assume creating a Job Log.

`CHGCMDDFT CMD(SIGNOFF) NEWDFT('LOG(*LIST)')`

2. Job Descriptions needs to output all job control data to Job Log. This is normally just QDFTJOBDD.

`CHGJOBDD JOBDD(QDFTJOBDD) LOG(4 00 *SECLVL) LOGCLPGM(*YES)`

3. Print Writers will assume Align forms needed on every print file. Need to change so that only print jobs asking for forms alignment will ask for it. Under certain circumstances, the desired option for ALIGN might need to be \*WTR not \*FILE. This would be the case if a particular printer received many request for the same form like an invoice and always it ask for alignment.

`CHGCMDDFT CMD(STRPRTWTR) NEWDFT('ALIGN(*FILE)')`

Note. This change will only go into effect on a print writer if you stop that writer and then start that writer again or after a re-ipl. Use WRKWTR to work with Printers.

4. Change WRKSPLF to always display in i5 format even if user is in a special environment such as S36. Be sure you want this before doing it.

`CHGCMDDFT CMD(WRKSPLF) NEWDFT('DSPFMT(*NORMAL)')`

5. Be sure job logs go to QEZJOBLOG Outq so they will not normally print.

`CHGPRTF FILE(QPJOBLOG) OUTQ(QEZJOBLOG)`

6. System Values to consider changing. This is not a comprehensive list, just a starting point.

a. QAUTOCFG	d. QDEVNAMING	g. QPWDEXPITV
b. QAUTORMT	e. QMAXSGNACN	h. QSECURITY
c. QAUTOVRT	f. QMAXSIGN
